Salt Security: Enhancing API Security and Operational Efficiency

Introduction

Organizations need **cost-effective solutions** that deliver **real business value**. While **API security is crucial**, teams face **resource limitations**. Salt Security helps security and development teams **maximize efficiency** by **discovering all APIs, automating posture enforcement**, **reducing triage times**, and **streamlining processes**—all while maintaining **strong API security and compliance** without adding **operational costs.**

Salt Security: Drive API Security & Operational Efficiency

- **Complete API Visibility & Automated Compliance:** Instantly discover all APIs (including shadow/zombie) and maintain continuous compliance with automated posture rules and real-time monitoring.

- **Proactive Threat Prevention & Faster Response:** Block threats pre-production to prevent costly breaches. Rapidly detect and resolve incidents, significantly reducing MTTD/MTTR and freeing up resources.

- **Streamlined DevSecOps:** Enhance developer productivity with automated API documentation (Swagger/OpenAPI). Integrate seamlessly with CI/CD pipelines to catch vulnerabilities early, enforce policies automatically, and automate security triage for faster issue resolution.

- **Protect Your Brand:** Safeguard critical data and your organization's reputation while demonstrating fiscal responsibility.

Simplified Procurement via Cloud Marketplaces

Easily procure Salt Security using **existing cloud budgets** through **AWS, Azure, and GCP Marketplaces**, maximizing current investments.

Maximize Value, Minimize Risk

With **Salt Security**, you can effectively **protect your APIs, cut costs, and empower your teams**, even in challenging economic conditions. Secure your critical projects and maintain robust API security and compliance without straining your budget or adding **operational costs**. Take the next step to optimize your resources while strengthening your defenses.
